

Go to the NetLogo library <http://www.netlogoweb.org/> and explore any 2 simulations (choose from 2 different categories (eg: computer science, math, art, science). Complete the chart.

1. Click around and explore. What did you do? What did you observe?
2. Look at the NetLogo code for that simulation. What do you notice? What syntax do you recognize? What patterns do you recognize? What question(s) do you have?
3. Skim the Model Info. Try one of the activities. What did you do? What did you observe? Go back to the NetLogo code; can you find the lines of code that relate to the task you tried?
4. How might you change this simulation?
5. Share one of the simulations that you explored with a partner. Have your partner share with you and record the information in the chart.

Name of simulation	q1	q2	q3	q4	q5
1.					
2.					
3.
